

Table and chairs set „Spóła”

1. Table

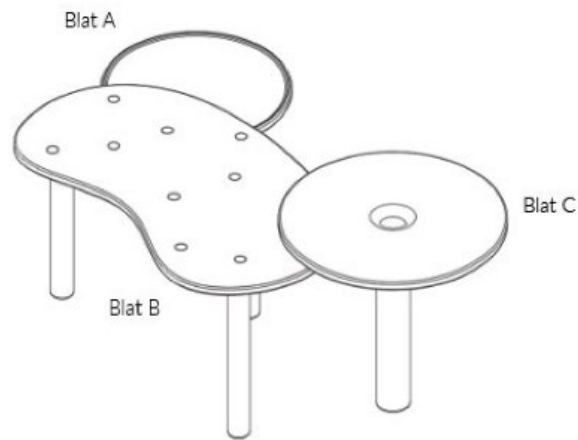

The inspiration for the project of the integration table for the public space of “Spóła” are graphs showing mathematical sets and their common parts. The table consists of three tops of various shapes, heights and sizes. Thanks to this solution, children from 3 to 8 years of age, who are at different stages of development, can play together in the same place. Each tabletop has a different age-specific characteristic, allowing children to exercise motor and intellectual skills.

The table, with its appearance and shape, encourages to discover, rearrange items and experiment. Children can approach it and use it from all sides while sitting or standing.

No sharp edges, soft, neutral colors and shapes are the characteristic features of the “Spóła” set. They are important when the furniture is used by children, especially those with sensory processing disorder. For this reason, the table does not contain permanently built-in movable teaching aids. During activities and play, children require time without additional stimulation.

The table consists of three tops that slightly overlap. Each table top has a different height adapted to the child's height: Table A is intended for 3-4 years old children, table top B for children 4-6 years old, and table top C for 6-8 years old. Natural dyes are provided to add colors to the table tops. Optionally, the table can be configured by changing the number of tops depending on the space and specificity of the place.

Overall dimensions: height 600 mm, width 965 mm, length: 1470 mm

Tabletop A:

- 3-4 years
- Height 460 mm, diameter 500 mm
- The top is brushed, what naturally emphasizes the structure of the wood. The uneven texture stimulates the sense of touch. The tabletop is also designed with a thicker edge to prevent the toys from falling.

Tabletop B:

- 4-6 years
- Height 530 mm, width 1200 mm, length 630 mm
- The top has colored dots (natural colored pegs glued into the top). In addition to the aesthetic function that inspires various games and stimulates creativity, the dots are designed for kids to learn how to count from 1 to 10.

Tabletop C:

- 6-8 years
- Height 600 mm, diameter 600 mm
- Tabletop with an integrated container for storing crayons and markers. Certainly, the imaginations of children will find many alternative uses for it (e.g. rolling a ball to the target).

2. Chairs

The chairs are available in three heights and colors to match the tabletops. The chair can be used both normally and facing backwards. The shape of the backrest allows them to be conveniently moved.

The construction of the chairs is identical, they differ only in the length of the legs and, possibly, their angle of inclination - to be assessed at the prototype.

Chair A:

- 3-4 years
- Seat height 260 mm
- Overall dimensions: height: 470 mm, width: 270 mm, length: 320 mm

Chair B:

- 4-6 years
- Seat height 310 mm
- Overall dimensions: height: 520 mm, width: 270 mm, length: 320 mm

Chair C:

- 6-8 years
- Seat height 350 mm
- Overall dimensions: height: 560 mm, width: 270 mm, length: 320 mm
